

# At HASA, Environment Matters

LEARN MORE

## HASA Sustainability

HASA is committed to advancing an **eco-friendly platform** across our product supply chain.

### Better for You, Better for the Environment

HASA Sani-Clor® is delivered in 4x1 reusable, returnable gallon deposit cases. This “green” delivery method enables pool service professionals to refill and reuse the plastic liquid pool chlorine bottles—and offers a safer, more efficient solution. Plus, our liquid sanitizer offers Pool Pros the **best cost per use** available.

Our 4x1 deposit cases keep **more than 25,000,000 plastic bottles out of oceans and landfills every year.**

The industry standard for liquid chlorine treatment for recreational pools, HASA’s sodium hypochlorite has set the bar for reliability and sustainability since 1964.

### Safer Materials Handling

- HASA sodium hypochlorite is safer to transport than trichlor or cal hypo tablets that can be flammable & require more caution to store and transport.
- When following appropriate guidelines, HASA’s easy-to-carry bottles and containers guard against leakage and spills.
- The new HASA Liquid Feeder™ regularly dispenses Sani-Clor® liquid sanitizer into backyard swimming pools—lowering the risk of product waste around children, pets & backyard surfaces.

- After they’re done cleaning recreational water systems, HASA products return to salt.
- Liquid sodium hypochlorite has been a trusted sanitizer for more than a century and a preferred method for maintaining swimming pools and recreational water for six decades.
- Fewer chemical byproducts left in the pool water and eventual wastewater.

Reduce.  
Reuse.  
Recycle

**HASA: Clearly Better®  
for Our Planet**
