

HASA ALKALINITY UP INCREASES TOTAL ALKALINITY

HASA ALKALINITY UP is used to increase alkalinity of swimming pool water when tests indicate lower than a normal reading of 80-120 ppm total alkalinity. Proper alkalinity adjustment insures better pH control and more efficient activity of sanitizing chemicals. Periodic alkalinity testing with a reliable four-in-one test kit should be done to keep total alkalinity in the 80-120 ppm range.

DIRECTIONS FOR USE:

While the pump is in operation, add 1.5 pounds of **HASA ALKALINITY UP** per 10,000 gallons of swimming pool water by distributing it directly into the pool water to increase alkalinity by approximately 10 ppm. Retest after four (4) hours and repeat if necessary. **HASA Soda Ash** is recommended to raise the pH of swimming pool water.

INGREDIENTS:

ACTIVE INGREDIENTS: Sodium Bicarbonate..... 100.00%

AVAILABLE PACKAGING:

HASA ALKALINITY UP is available in 5#, 40#, and 100# sizes.
