

HASA SANI-CLOR

LIQUID CHLORINATING COMPOUND

HASA SANI-CLOR is a sodium hypochlorite solution, marketed for use in the treatment of water in swimming pools, spas, and hot tubs. With the one exception of chlorine gas, it is the least expensive form of disinfecting swimming pool upon application destroying algae. bacteria, viruses, and other micro organisms.

HELPFUL HINTS: Do not adjust pH and chlorinate at the same time. Always adjust pH first, when pH is between 7.2-7.6, then adjust chlorine level to 1.5-3.0 ppm. Whenever chlorine residual is adjusted, allow filter and pump to run at least two hours after addition of chemical.

Stabilizing or "conditioning" pool water with HASA Pool Conditioner (cyanuric acid) will protect chlorine from being destroyed by ultraviolet radiation from the sun. Cyanuric acid levels should be maintained in 60-80 ppm range. Follow label instructions on how to achieve proper level of cyanuric acid.

DIRECTIONS FOR USE:

HASA SANI-CLOR is generally added directly to pool or spa water. Outdoor pools must be stabilized with HASA Pool Conditioner to protect chlorine from the UV rays of the sun. Eleven (11) ounces of HASA SANI-CLOR will provide approximately 1.0 ppm available chlorine in 10,000 gallons of water. Maintain chlorine residual between 0.6-3.0 ppm in an unstabilized pool and between 1.5-3.0 ppm in a stabilized pool. HASA SANI-CLOR mixes instantly with pool and spa water. Disinfection starts immediately upon application destroying algae, bacteria, viruses, and other micro-organisms.

Every 7 days, or as necessary, superchlorinate the pool with 50 to 100 fl.oz. of this product for each 10,000 gallons of water to yield 5 to 10 ppm available chlorine by weight. Check the level of available chlorine with a test kit. Swimming should be restricted until the free available chlorine residual has returned to normal maintenance levels.

AVAILABLE PACKAGING:

HASA SANI-CLOR is available in a disposable 2/1 and 4/1 case, returnable 4/1 case, 15 and 53 gallon drums. HASA SANI-CLOR is also packaged as HASACHLOR and MULTI-CHLOR.

HASA SANI-CLOR is even more economical in the 4/1 gallon returnable bottles and case. Using recyclable plastic bottles and cases saves the cost of expensive packaging which normally is thrown away.
